Makenta Engineering Sdn Bhd

TO WHOM IT MAY CONERN

We at Makenta Engineering Sdn Bhd deal with all types of storage and automotive batteries of various manufacture and capabilities. There were occasion that we have worked with Sulfarid Technologies (M) Sdn Bhd and are pleased to confirm the following:

- i) The Sulfarid battery Desulfators have been successful in the revival of the shelf sulfated automotive batteries that we dislocated for research and testing purposes. These batteries resisted normal charging and were destined to be scrapped for recycling.
- ii) Even some sealed lead acid battery of 6 to 8 years old were partially revived by the sulfarid battery Desulfator

We are pleased that the efforts of Sulfarid Technologies will be playing an appreciable role in environmental conservation as shelf batteries can now be put back into service, reducing the hazardous impact of indiscriminate disposal of batteries in some cases.

Yours truly,

Siew Chee Pong
Director
